

STICK IT TO HPV - Prevent cancer

Vaccinate your children today to prevent them from contracting HPV-related cancers later. The HPV vaccine protects against cancers caused by the human papillomavirus. The vaccine is FDA-approved to be given at age 9, and recommended for preteen boys and girls at age 11 or 12.

HPV VACCINE IS GIVEN AS A 2-DOSE SERIES

Date

1st DOSE

TODAY

2ND DOSE

AT 6-12 MONTHS

Additional (booster) doses are not recommended.
Contact your pediatrician or primary care physician for more information.

Provided by The University of Kansas Cancer Center and Children's Mercy Hospital
